Our work is done by a trained team, which follows the global system under the supervision of the Australian, UK Experts and operated by the experienced engineers.

We are offering 10 Years warranty for our system and the professional indemnity insurance available for our post-tensioning design and execution works.

## Our Team

We have a professional team with more than 15 years of experience in this field, who works meticulously to show it with the best quality.

We are the most experienced post-tensioning contractor in Bahrain, our value team approach provided best economic solution to our customers.

## Our Materials

We use high quality materials, our system has test reports from leading test laboratories, leading PT accreditation center, International test certificate from Australia, Dubai Central Laboratory (DCL) Approval, Bahrain Ministry of Work Approval.

Strands from ma'aden company (KSA Made) Anchorages from sts company (Australian Made).

## Our Equipments

We use high-quality equipment from international companies specialized in the field of post-Tension, to handover the projects in the best quality.

Regular maintenance of our equipment to ensure its correct operation.

# Benefits of Post-Tensioning

# SAVE MONEY & TIME

There are many benefits and savings associated with **post-tensioning**

## LARGER SPAN WITH FLAT SLAB

The Post-tensioning design and detailing provides maximum span ratio with lesser thickness of slab and without beams obstruction for MEP services. The floor to floor clear height increased by Post-tensioning.

## RAPID CONSTRUCTION

The light weight design and lesser reinforcement and flat formwork design increase the productivity for the construction. The early removal (4 days) of work increase construction speed and form work rental Cost

## ADVANCED TECHNOLOGY SAVE'S MONEY & TIME

Less reinforcement steel, Less concrete, Less formwork, Less installation time, Less manpower, Less materials shifting operations, Less supervision, Simplified detailing saves time and cost

## STABLE STRUCTURE & CRACK FREE

Post-tensioning systems are generally mandatory for bridges and due to strong tensile forces of the strands and more stronger than conventional structure and the pre-compression force controls crack.

## LESS MANPOWER AND LESS RISK

The construction work can be managed with less manpower and reduction labours reduces construction risks. Less operations saves construction time and cost and helps health, safety and environment risk.

## LESS AXIAL FORCE FOR FOUNDATION

The post-tensioning design reduces structural weight of the building which is provides cost savings in the foundation elements and less weight structure reduces axial forces in the foundation.

- ✓ The projects are designed by experienced structural design engineer.
- ✓ Each stage of activities are controlled by our quality management system ISO 9001.
- ✓ The most trusted system and the operations are handle by professional specialized team.

# 100% Professional
